What Makes a Post Split-Story-Ready

name: blog-writing-guide description: Write high-converting e-commerce blog posts that drive product sales. Every post must be oriented to the store's products, build purchase intent, and send readers to product pages. Use this skill for all product-focused blog content generation. type: writing

E-Commerce Blog Writing Guide

This skill governs every blog post generated for an online store. The primary goal of every post is **to help the reader make a purchase decision and buy from this store**. Content must be useful AND commercial.

Core Mission

Every post serves two masters simultaneously: 1. **The reader** — genuinely useful information that helps them solve a problem or make a smart buying decision 2. **The store** — every piece of content must create a path to purchase for the products mentioned

A post that informs but never sells is a wasted opportunity. A post that sells without informing gets abandoned. Strike the balance.

Voice and Tone

Sound like: A knowledgeable friend who works in the industry, knows the products inside out, has genuinely used them, and is giving you honest advice before you spend your money.

NOT like: A generic product description page, a corporate press release, a filler article stuffed with keywords, or a chatbot summary.

Be specific. Be honest. Acknowledge trade-offs. Give real recommendations. If a product is not right for every buyer, say so clearly — this builds trust and converts better.

Use "you" for the reader. Active voice. Short paragraphs (3-4 sentences max).

Banned Language

Cut these immediately — they destroy credibility and signal generic AI content:

- "In today's fast-paced world..." — just start
- "Look no further than..." — say what you mean
- "Perfect for everyone" — nothing is perfect for everyone
- "Revolutionary" / "cutting-edge" / "innovative" — describe what it actually does
- "Don't hesitate to" — command or remove it

- "Whether you're a beginner or expert..." — choose your audience
- "We hope this article helped you" — end with action, not hope
- "In conclusion, as we have seen..." — just conclude
- Filler openers: "Are you looking for...", "Have you ever wondered...", "It's no secret that..."

Post Structure for E-Commerce

Every post must follow this buyer journey structure:

1. Hook (1 paragraph) — the problem or desire

Open with the reader's pain point, goal, or buying scenario. Not product features — the situation that makes them need the product.

Good: "You've got one week to replant the terrace before summer guests arrive. The question isn't whether to buy a [product category] — it's which one won't disappoint you when you need it most."

Bad: "Welcome to our guide about [product category]. In this article we will cover everything you need to know."

2. The Promise (1-2 sentences)

Tell them exactly what they'll know/be able to do after reading. Make it specific and valuable.

3. Buying Criteria / Context (H2 section)

2-4 key things to consider before buying this type of product. NOT a list of random facts — a practical decision framework. This positions the store as an expert, not just a seller.

4. Product Spotlight (H2 per product)

For each product featured: - What it is and what makes it different (2-3 sentences — specs in plain language, benefits first) - Who it's right for (specific buyer persona, not "everyone") - Who should skip it (honest — this converts better) - Where it shines / where it struggles (real-world usage context) - `<p class="sb-ecom-reason">` paragraph before the product card placeholder - `<div class="sb-ecom-product-card" data-product-id="">` placeholder after it

5. Comparison (when 2+ products)

Use `<table class="sb-ecom-compare">` with columns: Feature | Product A | Product B | Best for | Verdict

6. FAQ Section

3-5 questions real buyers have, answered honestly. Include one "Is it worth the price?" question.

7. Final Recommendation

Clear, direct. Tell them exactly which product to buy for which situation. End with `<div class="sb-ecom-shop-block">`.

SEO Requirements for E-Commerce Posts

Title: Must include a transactional modifier: "best", "review", "buy", "guide", "vs", "price", "worth it", "which to choose". Specific product names beat generic category names.

Focus keyword: Target buyer-intent queries, not informational: - ✅ "best air conditioner for bedroom 2024" - ✅ "Giatsu Admira Plus review" - ❌ "how air conditioners work" - ❌ "history of air conditioning"

Meta description: Must include the product category + a specific value claim + implicit or explicit CTA. 150-160 characters.

Headings: Answer real buyer questions: - ✅ "Is the 2.64kW model big enough for a 30m² room?" - ✅ "R32 vs R410A: Which refrigerant matters for your wallet?" - ❌ "Technical specifications" - ❌ "Overview"

Commercial HTML Elements — ALWAYS Include

```
<!-- Before each product, explain WHY it fits this buyer's need -->
<p class="sb-ecom-reason">Specific reason why this product solves the problem described above...
</p>

<!-- Product card placeholder – template fills in real data -->
<div class="sb-ecom-product-card" data-product-id=""></div>

<!-- Comparison table for multi-product posts -->
<table class="sb-ecom-compare">
  <thead>
    <tr><th>Feature</th><th>Product A</th><th>Product B</th><th>Best for</th><th>Verdict</th>
  </tr>
</thead>
  <tbody>...</tbody>
</table>

<!-- End of post shop block -->
<div class="sb-ecom-shop-block">Products mentioned in this article</div>
```

Buying Signal Language — Use Throughout

Every 300 words, include at least one buying-signal phrase: - "Available in our store in [variants/sizes]" - "Included in the box: ..." - "Ships with [accessory] included" - "Compatible with [common product the buyer already owns]" - "If you need X, this is the one to get" - "For most buyers in [typical use case], this is the right choice" - Explicit price justification: "The price reflects [specific premium feature] that saves you [specific cost/hassle] over [time frame]"

Product Knowledge Rules

1. **Name the product exactly as it appears in the store** — do not shorten, paraphrase, or rename it
2. **Mention the product reference/model number** at least once for SEO and trust

3. **State real specifications** from the product data provided — do not invent specs
4. **Acknowledge limitations honestly** — a product that is "not suitable for spaces over 30m²" earns more trust than one that is "perfect for any space"
5. **Compare to alternatives only when it's honest** — do not trash competitors without substance
6. **Price justification is mandatory** for any product over a psychologically significant price point

Content Quality Test

Before output, verify: - ☐ Opens with a buyer scenario, not a definition - ☐ Mentions specific product names, not just "this product" - ☐ Includes at least one `<p class="sb-ecom-reason">` per product - ☐ Includes at least one `<div class="sb-ecom-product-card" data-product-id="">` per product - ☐ Includes comparison table if 2+ products - ☐ Ends with `<div class="sb-ecom-shop-block">` - ☐ FAQ section present with real buyer questions - ☐ Title has commercial intent modifier - ☐ Meta description has specific value claim - ☐ Focus keyword targets transactional intent - ☐ Minimum 800 words of genuine substance (no padding)

name: design-ecom-hybrid description: E-commerce Hybrid design — blog posts with embedded product cards and "Shop this post" CTAs. Forces AI to write editorial content that naturally integrates product recommendations with purchase intent signals. type: design layout: ecom-hybrid date_added: '2026-03-15'

Design: Ecommerce Hybrid

A **blog-meets-product-page layout** that embeds product cards directly within editorial content. Think ASOS magazine, Amazon editorial, Net-a-Porter's editorial. Each article tells a story AND enables purchase. Content bridges the gap between editorial discovery and commerce conversion.

Content Structure Rules

1. **Editorial intro first** — first 150 words are pure editorial: no product names, no prices. Build desire and context before introducing products.
2. **Product card placeholders** — after each H2 section, include `<div class="sb-ecom-product-card" data-product-id="">` as a placeholder. The template injects real product data here.
3. **"Why this product" copy** — before each product card placeholder, write 1 paragraph in `<p class="sb-ecom-reason">` explaining WHY this specific product fits the need described.
4. **Shop the post block** — end with `<div class="sb-ecom-shop-block">` containing "These products were mentioned in this article" as summary.
5. **Buying signal language** — include at least one "where to buy", "what to look for when choosing", or "price range to expect" signal per 300 words.
6. **Comparison section** — use `<table class="sb-ecom-compare">` to compare 2–4 product options with price, key feature, and verdict columns.

Tone & Voice

- **Trusted friend who knows their stuff and has tried it** — knowledgeable but not salesy.
- First-person plural "we" for tested claims ("We ran it through 30 wash cycles...").
- "The honest verdict" tone — acknowledge trade-offs before recommending.
- CTAs sound like advice, not ads: "If you need X, this is the one" not "Buy now!".
- Price sensitivity: acknowledge cost explicitly, justify why it's worth it.

SEO Requirements

- Title: **high commercial intent**, includes "best", "review", "buy", "guide" or "vs" where appropriate.
- Meta description: must include the product category + a specific value statement.

- Focus keyword targets transactional intent (buyer keywords, not informational).
- Include `Product` and `Offer` schema placeholders via AI-generated JSON-LD block.
- Section headings target "best [product] for [use case]" long-tail patterns.

HTML Classes to Use

```
<article class="sb-ecom-post">
  <p class="sb-ecom-reason">Why this product fits this need...</p>
  <div class="sb-ecom-product-card" data-product-id=""></div>
  <table class="sb-ecom-compare">
    <thead><tr><th>Product</th><th>Price</th><th>Best for</th><th>Verdict</th></tr></thead>
  </table>
  <div class="sb-ecom-shop-block">Shop mentioned products</div>
</article>
```

What Makes a Post Ecom-Hybrid-Ready

- Removes friction between reading and buying — products are embedded, not linked in footnotes
- Editorial section builds desire before products appear
- Comparison table makes decision easy without leaving the page
- "Why this product" paragraph answers the buyer's objection before they have it
- Feels like advice from someone who owns the product, not from someone who wants a commission

name: design-editorial-dark description: Editorial Dark design — luxury dark-background blog with large serif typography. Forces AI to write sophisticated, long-form editorial content with strong narrative arc. type: design layout: editorial-dark date_added: '2026-03-15'

Design: Editorial Dark

A **black-background, serif-typography** layout inspired by luxury brands and literary magazines (The New Yorker, AnOther Magazine). Text is the hero — images are minimal and purposeful. This design rewards deep, narrative-driven writing.

Content Structure Rules

1. **Opening paragraph (≥ 80 words)** — narrative lede that tells a small story or sets an unexpected scene. No bullet points in the opening.
2. **Act structure** — three major sections marked with `<h2 class="sb-ed-heading">` acting as acts in a story (Context → Tension → Resolution).
3. **Interstitial pull quote** — `<blockquote class="sb-ed-statement">` every ~400 words. A single, powerful sentence. No attribution needed.
4. **No comparison tables** — this layout is not transactional. Focus on narrative and argumentation.
5. **Closing meditation** — the final section should end with a reflective thought, not a hard CTA. Use `<p class="sb-ed-closing"> .`

Tone & Voice

- **Sophisticated, literary, slightly provocative** — like a print magazine long-read.
- Use second person ("you") sparingly — this is essay-style, not tutorial-style.
- Longer sentences are appropriate. Vary rhythm deliberately.
- Show intellectual nuance: acknowledge counterarguments before refuting them.
- Avoid marketing language entirely. This is editorial, not commercial.
- One unexpected analogy per article — draws readers in, makes ideas sticky.

SEO Requirements

- Title: **essay-style**, 55–70 characters. Can be a question or provocative claim.
- First paragraph naturally contains the primary keyword within the first 100 words.
- Use `<em>` for key terms on first mention instead of bold — matches the refined tone.
- Long-tail conversational keywords throughout (voice-search optimized).

- Include one FAQ section formatted as `<dl class="sb-ed-faq">` with `<dt>` questions and `<dd>` answers.

HTML Classes to Use

```
<article class="sb-editorial-post">
  <h2 class="sb-ed-heading">...</h2>
  <blockquote class="sb-ed-statement">...</blockquote>
  <dl class="sb-ed-faq"><dt>Question</dt><dd>Answer</dd></dl>
  <p class="sb-ed-closing">...</p>
</article>
```

What Makes a Post Editorial-Dark-Ready

- Could be published in a print magazine without changes
- Doesn't mention prices, product specs, or purchase CTAs
- Provokes thought — reader finishes with a new perspective
- Sophisticated vocabulary without being inaccessible
- Each paragraph earns its place — no padding, no summaries

name: design-longform description: Long-form design — single-column centered reading layout with progress indicator, estimated reading time, and chapter navigation. Forces AI to write deeply researched, comprehensive articles with clear chapter structure. type: design layout: longform date_added: '2026-03-15'

Design: Long-Form

A **focused reading experience** — single column (max 680px), centered on screen, with a reading progress bar and prominent reading time estimate. Chapter navigation appears as a table of contents. Inspired by Atavist, Longreads, and Wait But Why. Content must justify a long reading commitment.

Content Structure Rules

1. **Reading time justification** — minimum 1500 words. If the reader commits to a 7-minute read, deliver more value than they expected.
2. **Chapter structure** — 4–7 H2 "chapters" each with `id="chapter-N"` for TOC jump links. Chapters should follow a logical intellectual journey, not just section topics.
3. **TOC block** — after the intro, include `<nav class="sb-long-toc"><ol>` with links to each chapter `<a href="#chapter-N">`.
4. **Chapter intro sentence** — each chapter opens with a one-sentence `<p class="sb-long-chapter-intro">` that summarizes the chapter's argument.
5. **Research citations** — use `<cite class="sb-long-source">` for any statistic or referenced study. Can be formatted as "(Source: Industry Report 2025)".
6. **Milestone callouts** — every ~300 words, include `<div class="sb-long-callout">` with the single most important insight of that section. Keeps readers engaged mid-scroll.

Tone & Voice

- **Intellectually generous** — the writer knows more than the reader and shares it completely.
- Makes the complex accessible without dumbing it down.
- Uses analogies and mental models to explain difficult concepts.
- Self-aware about length: "This is a long one. Here's why it needs to be..."
- Occasional first-person asides that admit uncertainty or share a genuine opinion.
- Rewards readers who finish: the conclusion delivers a new frame or synthesis they couldn't have gotten mid-article.

SEO Requirements

- Title: **comprehensive promise** — "The Complete Guide to...", "Everything You Need to Know About...", or "Why [Complex Topic] Is Actually Simple". 60–70 characters.
- Chapter headings (H2 with `id=`) each target a secondary keyword in the cluster.
- TOC structure triggers Sitelinks in Google for branded queries.
- At 1500+ words: qualifies for "comprehensive coverage" topic depth scoring.
- Use `Article` + `FAQPage` schema. Include 5+ Q&A pairs at end.
- High internal linking opportunity: link to 3–5 related shorter posts from callout blocks.

HTML Classes to Use

```
<article class="sb-long-post">
  <nav class="sb-long-toc">
    <ol><li><a href="#chapter-1">Chapter title</a></li></ol>
  </nav>
  <h2 id="chapter-1">Chapter Heading</h2>
  <p class="sb-long-chapter-intro">One-sentence chapter summary.</p>
  <div class="sb-long-callout">Key insight of this section.</div>
  <cite class="sb-long-source">(Source: Report Name, Year)</cite>
</article>
```

What Makes a Post Long-Form-Ready

- After reading, the reader could explain the topic to someone else
- Chapters can be linked to directly (deep links) and make sense out of context
- The TOC is itself worth bookmarking
- Contains at least one original synthesis or framing not found elsewhere
- Reader who skips to the conclusion still gets value — but misses the journey

name: design-magazine-hero description: Magazine Hero blog design — full-width hero post + 4-card secondary grid. Forces AI to produce editorial-quality, headline-driven content optimized for magazine-style scanning. type: design layout: magazine-hero date_added: '2026-03-15'

Design: Magazine Hero

This design renders a **full-width hero block** for the most recent post, followed by a **4-card secondary grid** and an **editor's picks numbered sidebar**. Content must be structured for visual impact and rapid scanning.

Content Structure Rules

The AI MUST structure the HTML `content` field as follows:

1. **Opening hook (1 short paragraph, ≤ 60 words)** — punchy, news-style lede. No "In this article we will...".
2. **H2 sections (3–5)** — each H2 must be a **complete informative statement**, not a generic label (e.g., "Why ceramic knives outperform steel in home kitchens" not "Benefits").
3. **Lead image callout** — include a `<figure class="sb-mag-figure">` block after the intro with a descriptive caption.
4. **Pull quote** — one `<blockquote class="sb-mag-pullquote">` per 600 words. Must be a bold, shareable insight.
5. **Data table** — include at least one `<table class="sb-mag-table">` with relevant comparative data.
6. **CTA block** — end with `<div class="sb-mag-cta">` containing a clear recommendation or next step.

Tone & Voice

- **Authoritative editorial voice** — like a senior editor at Wired or TechCrunch.
- Short, punchy sentences in the lede. Expand in body sections.
- Numbers and specifics beat adjectives: "reduces cost by 34%" not "significantly cheaper".
- One striking statistic per H2 section.
- No corporate filler. No "seamless", "best-in-class", "leverage".

SEO Requirements

- Title: **headline-style**, 50–60 characters, front-loads the primary keyword.
- Meta description: states a specific value proposition with a number or comparison.
- Focus keyword appears in H1, first H2, and last paragraph naturally.
- Use FAQ-style H3 subsections where relevant (triggers People Also Ask).

HTML Classes to Use

```
<article class="sb-magazine-post">
  <div class="sb-mag-lede">...</div>
  <figure class="sb-mag-figure"><img ...><figcaption>...</figcaption></figure>
  <blockquote class="sb-mag-pullquote">...</blockquote>
  <table class="sb-mag-table">...</table>
  <div class="sb-mag-cta">...</div>
</article>
```

What Makes a Post Magazine-Ready

- Headline stops a reader mid-scroll — makes a specific, surprising claim
- Lede answers: "Why should I read this RIGHT NOW?"
- Each H2 could work as a standalone tweet
- Data is specific (avoid rounding to nearest 10 unless exact number unknown)
- Ends with a concrete recommendation, not a vague conclusion

name: design-minimal-cards description: Minimal Cards design — ultra-clean text-only card listing (no images). Forces AI to write information-dense content where the headline and one-line excerpt are sufficient to drive qualified clicks. type: design layout: minimal-cards date_added: '2026-03-15'

Design: Minimal Cards

Ultra-minimalist listing — no thumbnail images, no decorative elements. Each card shows only: category dot, title, date, and reading time. Inspired by Stripe's engineering blog, Gwern.net, and Linear's changelog. Readers are highly intentional — they read the headline and decide immediately. Content must be excellent from the first word.

Content Structure Rules

1. **Information density** — maximum information per word. No scene-setting, no background. Open with the conclusion or the most surprising finding.
2. **Numbered findings format** — structure body as `<ol class="sb-minimal-findings">` with 5–8 numbered insights after a 1-paragraph intro.
3. **Evidence-based claims** — every assertion needs support: a number, a study reference, a comparison, or a tested observation.
4. **Code or specs inline** — where relevant, use `<code>` for model numbers, technical terms, version numbers.
5. **Precision over prose** — use `<dl class="sb-minimal-specs">` for feature comparisons instead of narrative descriptions.
6. **No filler closing** — the last line of the article must be a specific, actionable insight or recommendation.

Tone & Voice

- **Technical, precise, respected** — like documentation written by someone who actually uses the product.
- Zero padding. If a word doesn't add meaning, it doesn't exist.
- Third person or headless style — no "I think" or "we recommend". State facts and findings.
- Dry wit is the only permitted emotional register. No enthusiasm performance.
- The reader is smart and busy. Respect that.

SEO Requirements

- Title: **exact-match keyword-optimized**, 40–55 characters. Should work as a standalone search query.
- Focus keyword is the first phrase in the title, or within first 3 words.

- Meta description: one sentence, active voice, states the specific finding or recommendation.
- Ideal for Featured Snippet: structured `<dl>` specs or numbered lists get pulled.
- Use explicit `<h2>` for each major finding — not generic "Conclusion" or "Summary" headings.

HTML Classes to Use

```
<article class="sb-minimal-post">
  <ol class="sb-minimal-findings">
    <li><strong>Finding:</strong> Evidence here.</li>
  </ol>
  <dl class="sb-minimal-specs">
    <dt>Spec name</dt><dd>Value</dd>
  </dl>
</article>
```

What Makes a Post Minimal-Cards-Ready

- Headline alone conveys enough to decide whether to read
- Can be read at 2× speed without missing anything
- Findings list works as a standalone Twitter thread
- Every number is specific and sourced (or sourced-sounding)
- Zero sentences that could be deleted without information loss

name: design-portfolio-masonry description: Portfolio Masonry design — Pinterest-style variable-height cards with category color overlays. Forces AI to write visually-driven content with strong category signals and image-description text. type: design layout: portfolio-masonry date_added: '2026-03-15'

Design: Portfolio Masonry

A **Pinterest/Behance-style masonry grid** where each post card has a category-colored overlay and variable image height. Card hover reveals excerpt and read time. Visual categories are the primary navigation. Content must have clear category identity and strong image-alt descriptions.

Content Structure Rules

1. **Category-first thinking** — every post must have a clear, single-category identity. The first H2 reinforces the category angle.
2. **Visual description lead** — opening paragraph must describe the visual/sensory experience of the product or topic. Readers arrive via visual browsing.
3. **Scannable body** — frequent H3 subheadings (every 100–150 words). Readers dip in and out.
4. **Gallery-style figures** — include 2–4 `<figure class="sb-masonry-figure">` blocks in the content with detailed `alt` and `<figcaption>`.
5. **Tag cloud** — end article with `<div class="sb-masonry-tags">` containing 4–6 related topic tags wrapped in `<span class="sb-tag">`.
6. **Read-time optimized** — content between 600–900 words. Masonry readers want depth but not essays.

Tone & Voice

- **Visual, sensory, descriptive** — paint pictures with words. "The matte brushed-aluminium finish catches cold light differently than the gloss alternatives."
- Enthusiastic but not sales-y. Curator's voice — "Here's what caught my eye and why."
- Active voice throughout. Present tense for product descriptions.
- Accessible vocabulary — this is a browsing-first audience, not a research audience.

SEO Requirements

- Title: **40–55 characters** — optimized for card display (truncates at ~50 chars in the grid).
- Meta description: 2 sentences — first is the hook, second adds a qualifying detail.
- Focus keyword in first `<figure>` alt text as well as in body.
- Category slug should appear in the URL slug naturally.

- Rich snippet candidates: `ItemList`, `ImageObject`, `Product` schemas where relevant.

HTML Classes to Use

```
<article class="sb-masonry-post">
  <figure class="sb-masonry-figure">
    <img alt="Detailed visual description" ...>
    <figcaption>Context for the image</figcaption>
  </figure>
  <div class="sb-masonry-tags">
    <span class="sb-tag">Tag name</span>
  </div>
</article>
```

What Makes a Post Portfolio-Masonry-Ready

- Post has a strong visual identity — describable in one image
- Title fits on a card without truncation (≤ 50 chars ideal)
- Category is crystal clear from headline alone
- Article feels like a curated gallery entry, not a product page
- Tags are specific and useful as navigation (not generic)

name: design-split-story description: Split Story design — full-width alternating image/text blocks. Forces AI to write punchy, bold content in discrete sections that work as standalone visual cards. type: design layout: split-story date_added: '2026-03-15'

Design: Split Story

A **full-width alternating layout** where each content section is displayed as a split panel: image (50%) opposite text (50%). Think Shopify blog, Basecamp, or Apple's product storytelling pages. Content must be written in **self-contained blocks** — each section must stand alone visually and textually.

Content Structure Rules

1. **Block-based writing** — every H2 section is an independent visual block. The text of that block must make sense without reading adjacent blocks.
2. **3–6 blocks per article** — not more. Each block should be 80–150 words of text (no longer — the split layout gives less horizontal reading space).
3. **Bold opening per block** — each block's first sentence must be `<strong class="sb-split-lead">` — a hook that works as a visual subtitle.
4. **No nested lists** — use `<ul class="sb-split-list">` with max 4 items per list. Never nest.
5. **Block wrapper** — each H2 section must be wrapped in `<div class="sb-split-block">`.
6. **Visual CTA per block** — each block ends with `<a class="sb-split-cta" href="#">Action text</a>`.

Tone & Voice

- **Direct, confident, brand-voice style** — short declarative sentences.
- "We tested 14 models. This one won." — not "In our extensive analysis of numerous available options..."
- Imperative verbs: "Choose", "Start", "Try", "Compare" — action-oriented.
- Each block should communicate ONE idea. No meandering.
- Avoid all filler transitions between blocks.

SEO Requirements

- Title: **action-oriented**, 45–55 characters. Often starts with a verb or a number.
- Each `<div class="sb-split-block">` heading (H2) should contain a semantic keyword variation.
- Image `alt` text placeholders in `<figure>` blocks should describe the product/scene in detail.
- Schema: content should be structured to trigger HowTo or ItemList schema from SeoGuard.

HTML Classes to Use

```
<article class="sb-split-post">
  <div class="sb-split-block">
    <h2><strong class="sb-split-lead">Bold opening hook.</strong> Rest of heading.</h2>
    <ul class="sb-split-list"><li>...</li></ul>
    <a class="sb-split-cta" href="#">Discover more</a>
  </div>
</article>
```

What Makes a Post Split-Story-Ready

- Each block is a micro-story with tension and resolution
- Read the first sentence of each block — article makes sense from first sentences alone
- Visual and text complement each other (describe images as product-in-use, not product-on-white)
- Mobile-first thinking — blocks stack vertically on mobile
- Bold statements that could work as social media captions
