What is Tradeplace Product Information Management Services?

With the "Product Information Management Services" (PIMS), Tradeplace offers a "product data export service" in various formats available on the market.

Access to Product Information Management Services.

First, PIMS must be activated for you. Then click on the PIMS logo to gain access to Product Information Management Services.

The screenshot shows the Tradeplace website interface. At the top, there is a navigation bar with the Tradeplace logo and a user profile section labeled "Solution Service Center (TP14132023)" with a "Logout" button and a flag icon. Below the navigation bar, there are three main service cards: "Online portals", "After sales marketplace", and "Product information management services". The "Product information management services" card is highlighted with a yellow border. Below these cards, there is a large blue button labeled "PIMS". Underneath the "PIMS" button, there is a smaller button labeled "Start PIMS" with a document icon. At the bottom of the page, the text "PRODUCT INFORMATION MANAGEMENT SERVICES" is displayed in a bold, italicized font.

Available Features

The following functions are currently available in PIMS:

1. **Activation Request**: this allows you to activate your customer number at the desired supplier to export the supplier's product data.
2. **Data Export**: allows you to export product data in various formats, including Microsoft Excel and CSV (comma-separated values).
3. **Digital Asset Portal**: provides you easier access to the Assets that are uploaded by the Manufacturers, you can filter through different criteria in various ways, allowing you to select individual items or asset categories completely.
4. **TradePixl**: Structured and customized data export (Excel) of specially selected product data.

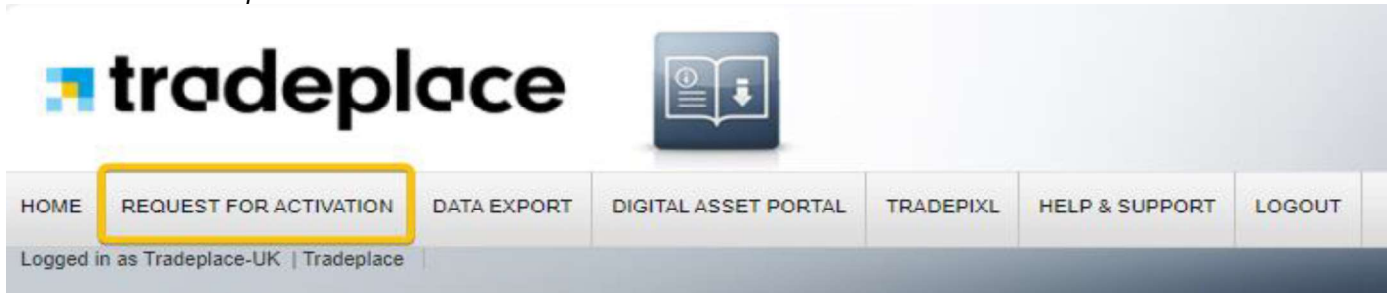

You will find detailed information about these modules on the following pages.

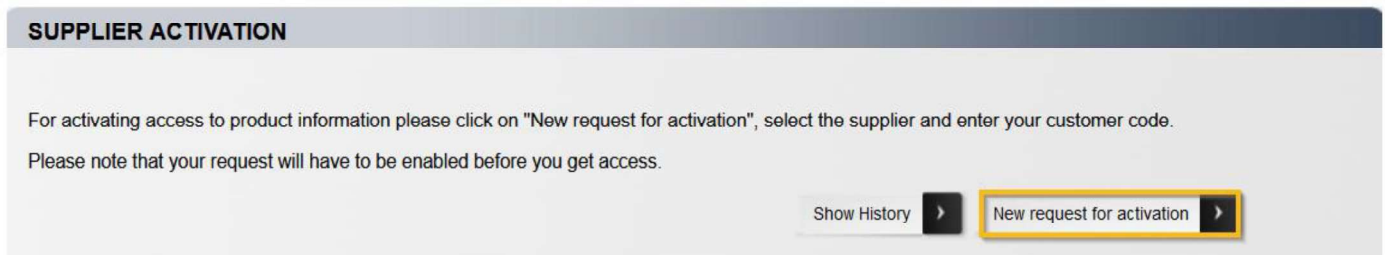

Request for Activation

To transfer product data from the available suppliers, it is necessary to have your customer number ready at the respective supplier.

1. Click on *Request for Activation*.

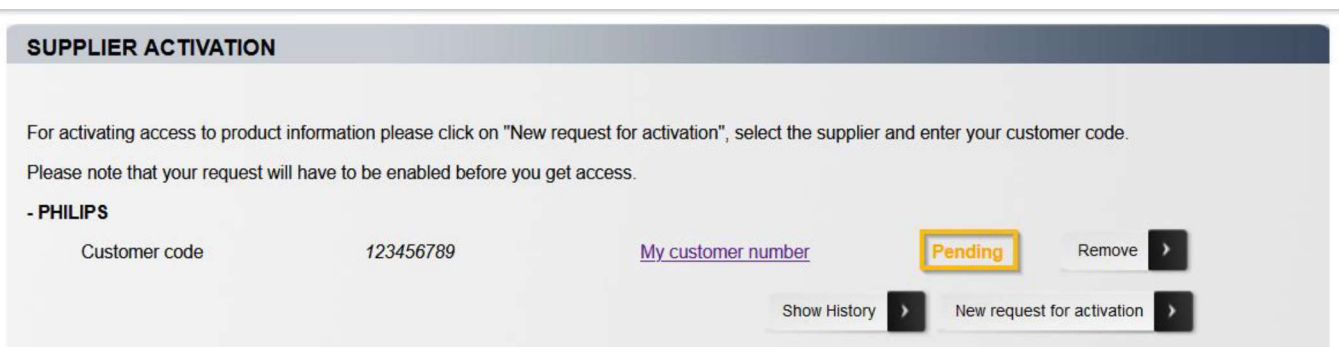

You can submit the activation request in the following menu.

2. Select the supplier in this menu.
3. In the next step, enter your customer number with this supplier and then click on *Send request*.

Please note that your request status in PIMS will be set to "Pending" until the selected supplier has activated your customer number. Only then you can export data.

After the supplier has confirmed the request and corrected your customer number (if necessary) the status of your customer number will be changed to "Active". If the supplier rejects the request, you will be informed accordingly.

SUPPLIER ACTIVATION

For activating access to product information please click on "New request for activation", select the supplier and enter your customer code.

Please note that your request will have to be enabled before you get access.

- PHILIPS

Show History

New request for activation

PIMS also offers the option of scheduling the data export. Export planning is not activated by default so an activation request and confirmation must be carried out by Tradeplace.

REQUEST ACTIVATION OF SCHEDULE OPTIONS

It is possible to let PIMS export data based on a schedule.

Scheduled export is not activated by default. If you would like to schedule your exports please request it below.

Send request to Tradeplace Administrator

Data Export

You can define settings for data export in the "Data export" menu.
To do this, click on the "Data export" button in the top menu bar or via HOME.

The screenshot shows the Tradeplace dashboard. The top navigation bar includes links for HOME, REQUEST FOR ACTIVATION, DATA EXPORT (highlighted with a yellow box), DIGITAL ASSET PORTAL, TRADEPIXL, HELP & SUPPORT, and LOGOUT. Below the navigation bar, there are three main sections: PRODUCT INFORMATION MANAGEMENT SERVICES, DIGITAL ASSET PORTAL, and TRADEPIXL. Each section contains a description and a button. In the PRODUCT INFORMATION MANAGEMENT SERVICES section, the DATA EXPORT button is highlighted with a yellow box. In the DIGITAL ASSET PORTAL section, the DIGITAL ASSET PORTAL button is highlighted. In the TRADEPIXL section, the TRADEPIXL button is highlighted.

The export profile list appears.

The screenshot shows the Tradeplace dashboard with the "List of created profiles" section highlighted. Below the navigation bar, there is a table with the following columns: Creation date, Profile name, Schedule mode, Actions, and Status (CET timezone). The table is currently empty. A "Filter" button is visible next to the table. A "Create new export profile" button is located at the bottom right of the table.

An export profile contains all the essential information about data formatting and other settings for the export. You can edit the profile at any time to change the settings. Several different export profiles can be created to suit your requirements.

How to create a New Export Profile?

To do this, click on *Data Export* > *Create a new export profile*.

The selection process is divided into different steps, which you can go through one after the other.

On the right-hand side, you can see the step highlighted in yellow that you are currently in as well as the remaining steps that still need to be completed.

The screenshot shows the Tradeplace Data Export interface. The top navigation bar includes links for HOME, REQUEST FOR ACTIVATION, DATA EXPORT (highlighted), DIGITAL ASSET PORTAL, TRADEPIXL, HELP & SUPPORT, and LOGOUT. Below the navigation bar, there is a section titled "List of created profiles" with a filter input and a "Filter" button. A table lists the created profiles:

Creation date	Profile name	Schedule mode	Actions	Status (CET timezone)
12/28/2023	ASC_Test	Manual export	Edit Delete Execute	Last run 1/5/2024 10:50

Below the table, there is a "Create new export profile" button. The second screenshot shows the "CHOOSE SUPPLIER" step. It includes instructions on how to configure the Data Export profile and select a Supplier and Customer Code. The "01 Choose Supplier" step is highlighted in the right-hand sidebar. The main content area shows two dropdown menus: "Supplier" (with "Select a supplier" as the selected option) and "Customer Code" (with "Select Customer Code" as the selected option). At the bottom right, there are "Cancel" and "Next" buttons.

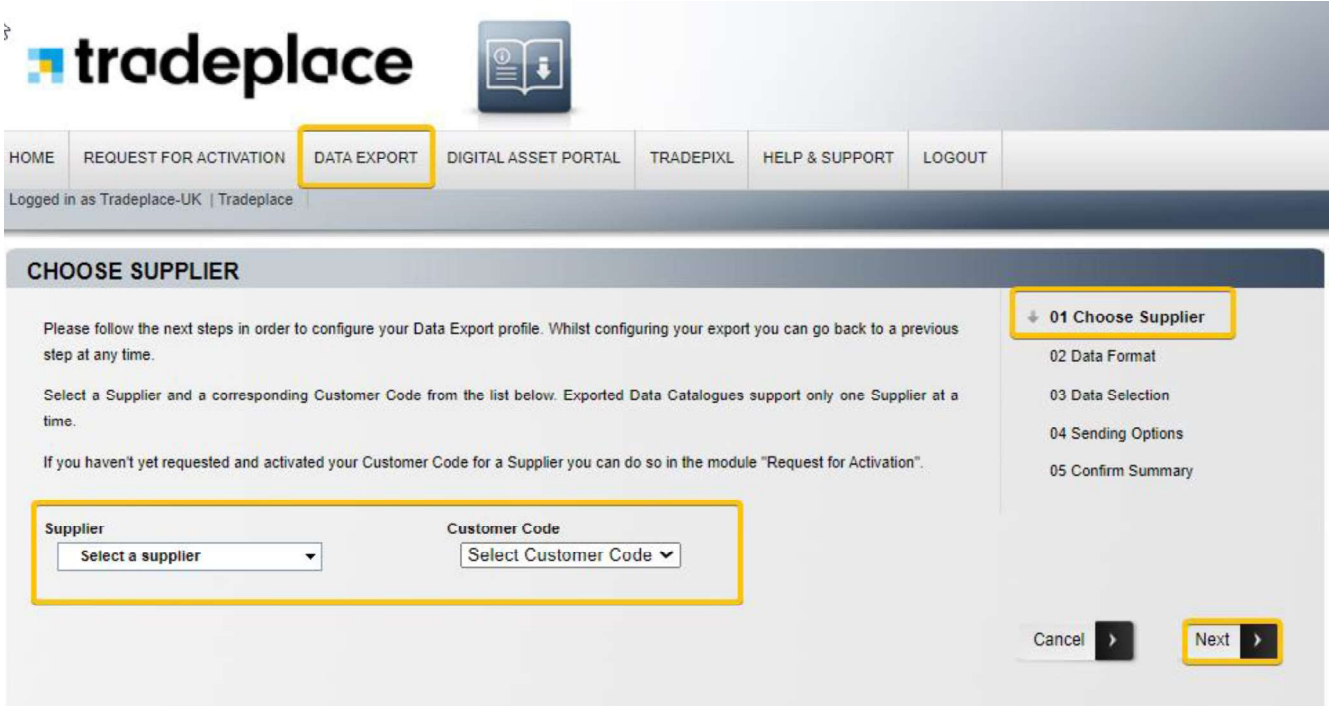

Step 1: Choose Supplier

For the first step, you must select a supplier from the "Supplier" selection list.

Please select the corresponding customer number, as the input options in the next steps depend on the supplier and customer number selection.

If, after selecting a supplier, you receive the message "You do not have a customer number for this supplier. Would you like to submit an activation request?", then you have not yet carried out an activation request. (see chapter: Activation request").

If you have already submitted an activation request and received the above message, your request is still open or has been rejected. You can check the status of your request at any time in the *Activation request* menu.

After selecting the desired suppliers and the corresponding customer number, please click on "Next". The menu item "Select supplier" is then highlighted in green.

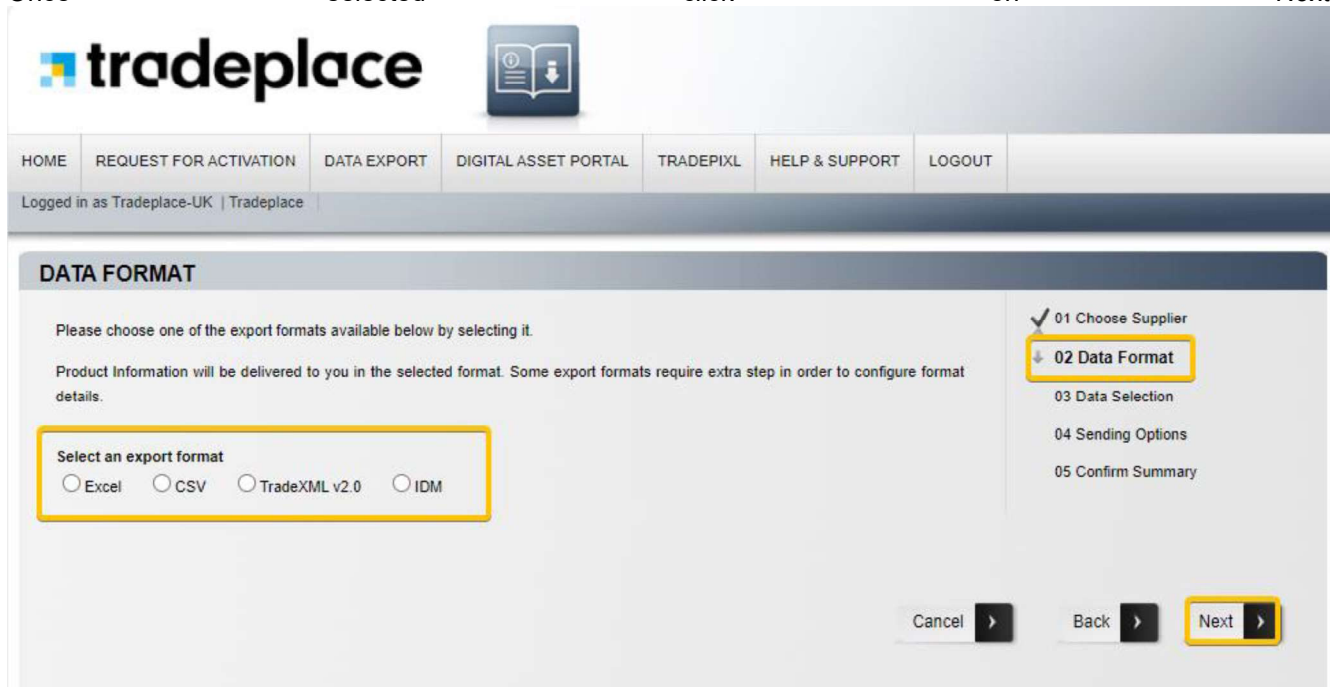

You will be automatically forwarded to the 2nd menu item Data format.

Step 2: Data Format

In the *Data format* step, select an export format. You will then receive an export file in the format of your choice. Depending on the data format selected (e.g. Excel, CSV ...), additional settings can be made in a further step.

Once selected click on *Next*

The screenshot shows the Tradeplace web interface for the 'DATA FORMAT' step. The top navigation bar includes the Tradeplace logo, a document icon, and links for HOME, REQUEST FOR ACTIVATION, DATA EXPORT, DIGITAL ASSET PORTAL, TRADEPIXL, HELP & SUPPORT, and LOGOUT. Below the navigation bar, it indicates the user is logged in as 'Tradeplace-UK | Tradeplace'.

The main content area is titled 'DATA FORMAT' and contains the following text:

Please choose one of the export formats available below by selecting it.

Product Information will be delivered to you in the selected format. Some export formats require extra step in order to configure format details.

Below this text is a section titled 'Select an export format' with four radio button options: Excel, CSV, TradeXML v2.0, and IDM. The 'Excel' option is selected.

On the right side, there is a vertical list of steps in the process:

- 01 Choose Supplier (checked)
- 02 Data Format (highlighted with a yellow box)
- 03 Data Selection
- 04 Sending Options
- 05 Confirm Summary

At the bottom right, there are three buttons: 'Cancel', 'Back', and 'Next'. The 'Next' button is highlighted with a yellow box.

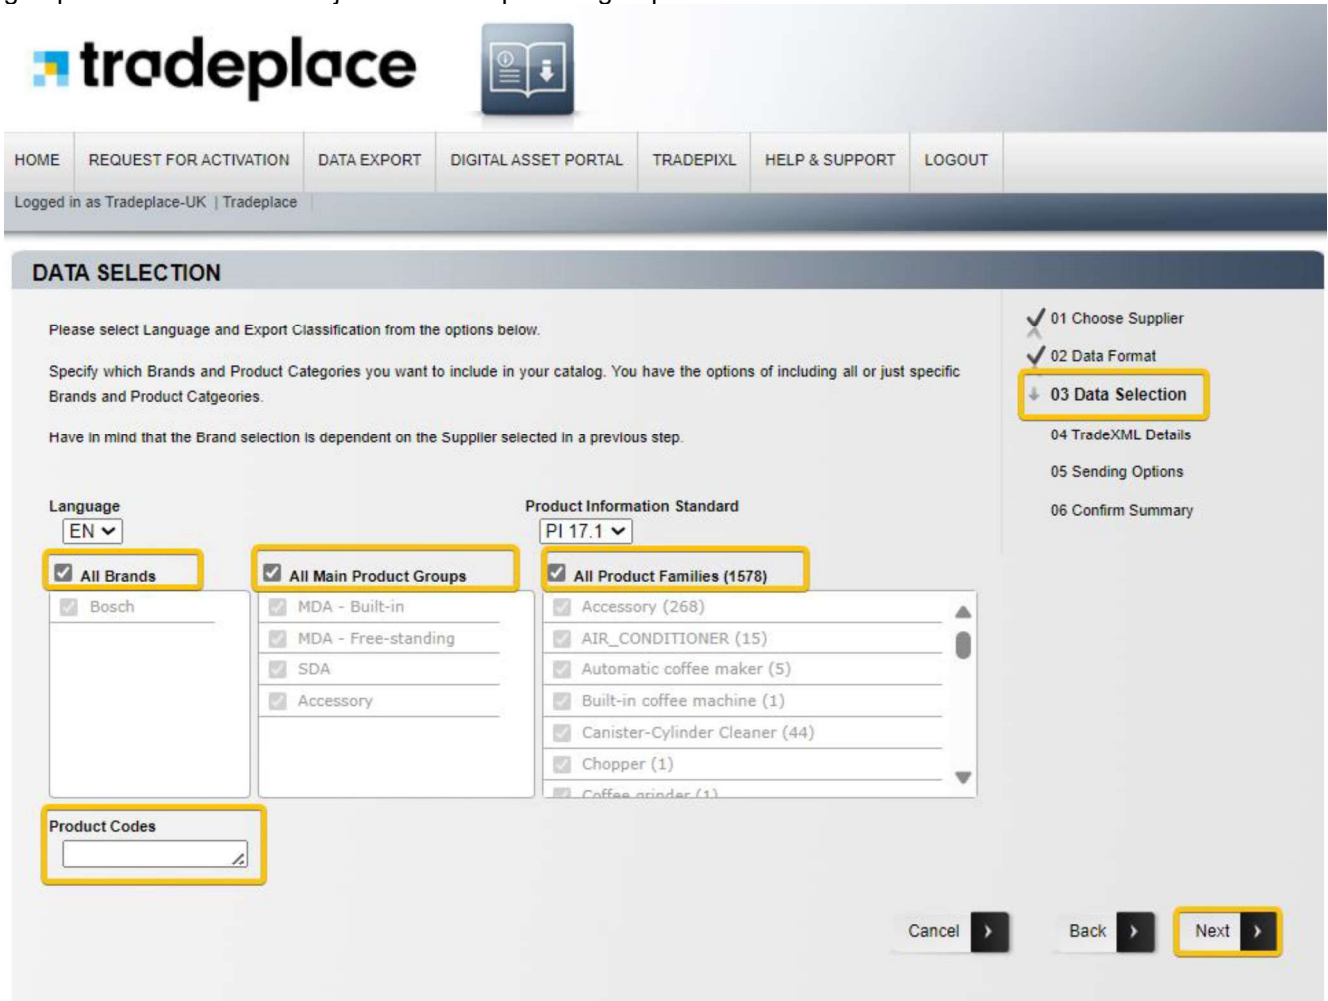

Step 3: Data Selection

In the Data selection step, you can define the content of the export file.

Please select the language, the export standard, the brand, the main product group, and the product groups.

The values in brackets after each product group indicate the number of products that are available for this product group. You can select all or just individual product groups.

DATA SELECTION

Please select Language and Export Classification from the options below.

Specify which Brands and Product Categories you want to include in your catalog. You have the options of including all or just specific Brands and Product Categories.

Have in mind that the Brand selection is dependent on the Supplier selected in a previous step.

Language: EN

Product Information Standard: PI 17.1

☒ All Brands

- ☒ Bosch

☒ All Main Product Groups

- ☒ MDA - Built-in
- ☒ MDA - Free-standing
- ☒ SDA
- ☒ Accessory

☒ All Product Families (1578)

- ☒ Accessory (268)
- ☒ AIR_CONDITIONER (15)
- ☒ Automatic coffee maker (5)
- ☒ Built-in coffee machine (1)
- ☒ Canister-Cylinder Cleaner (44)

Cancel Back Next

Once selected click on *Next*.

If you want to export files in Excel, CSV, or TradeXML format, you can use predefined system templates or create your own templates in an additional step. These templates contain information about names, product properties, sequence, and sorting.

To create your own templates based on existing system templates, please select a template from the list and click on *Edit*, if you want to create a new template, click on *New*.

Choose export template

1. Full TradeXML (System template) ▼

Edit Delete New Template

The *Template options* menu appears. You can select the product properties to be inserted into the template.

Template options

Name	Alias	SortType	SortOrder	Constant Value
PRODUCT_FAMILY_NAME	ProductFamily Name	ASC	1	
BRAND	Brand	ASC	2	
PRODUCT_CODE	Product code	ASC	3	
EAN	EAN code			
LIST_PRICE	List price			
RECOMMENDED_PRICE	Recommended price			
USP_1	USP information 1			
USP_2	USP information 2			

Add Properties Add Constant Delete Move up Move down Add Assets Add UoM

Template name TEST

☐ Include all PI-Properties automatically
☐ Generate separate sheet per Product Family
☐ Include all assets automatically
☐ Include all units of measure automatically

Cancel Save

If you want to change a predefined system template, you can add or delete product properties or change the sorting. You can also assign your own names to the properties as aliases.

To do this, click on *Add properties*.

You can now select one or more properties. To do this, click on the box in front of the respective property. You can also search for properties by entering text in the input field.

Then click on *Add properties*.

Template property selector

In the property list below you can find all properties which are available for most of the Product Families.

Note: You can also define a Product Family specific template with more detailed properties. Therefore you have to select only one specific Product Family in the previous 'Data Selection' first and open this 'Template Editor' again.

Search Filter 

Property definitions			
☐	PropertyName	PropertyDescription	
☐	UNIT_NET_PRICE_CURR	Customer-specific price currency	
☐	LIST_PRICE	List price	
☐	LIST_PRICE_CURR	List price currency	
☐	RECOMMENDED_PRICE_CURR	Recommended price currency	
☐	RECOMMENDED_PRICE	Recommended price	
☐	SPECIALPRICE	Special Price	
☐	VATPercentage	The percentage of VAT (value added tax) on the product purchase price	
☐	UNIT_NET_Price	Customer-specific price	

Cancel  

Now enter a name for your template. Depending on the export format selected, there are further additional settings that you can define for the template. The following two formats have a wider range of options, considering some of them overlap.

EXCEL

- **Include all PI-Properties automatically:** this will select all properties and add them to the template.
- **Generate separate sheet per Product Family:** this will separate the files per product family into individual sheets.
- **Include all assets automatically:** this will add all existing assets on the selected catalogue and add them

automatically, you can also select individually by clicking

Add Assets 

where a separate menu will appear.

- **Include all units of measure automatically:** this will add all units of measure on the selected catalogue

and add them automatically, you can also select individually by clicking

Add UoM 

where a separate menu will appear.

Template name

☐ Include all PI-Properties automatically
☐ Generate separate sheet per Product Family
☐ Include all assets automatically
☐ Include all units of measure automatically

☐ Use alias as headers
☐ Remove header line
☐ Include all PI-Properties automatically
☐ Use separate file for each product family
☐ Additional File with all PI Properties
☐ Include all assets automatically
☐ Include all units of measure automatically

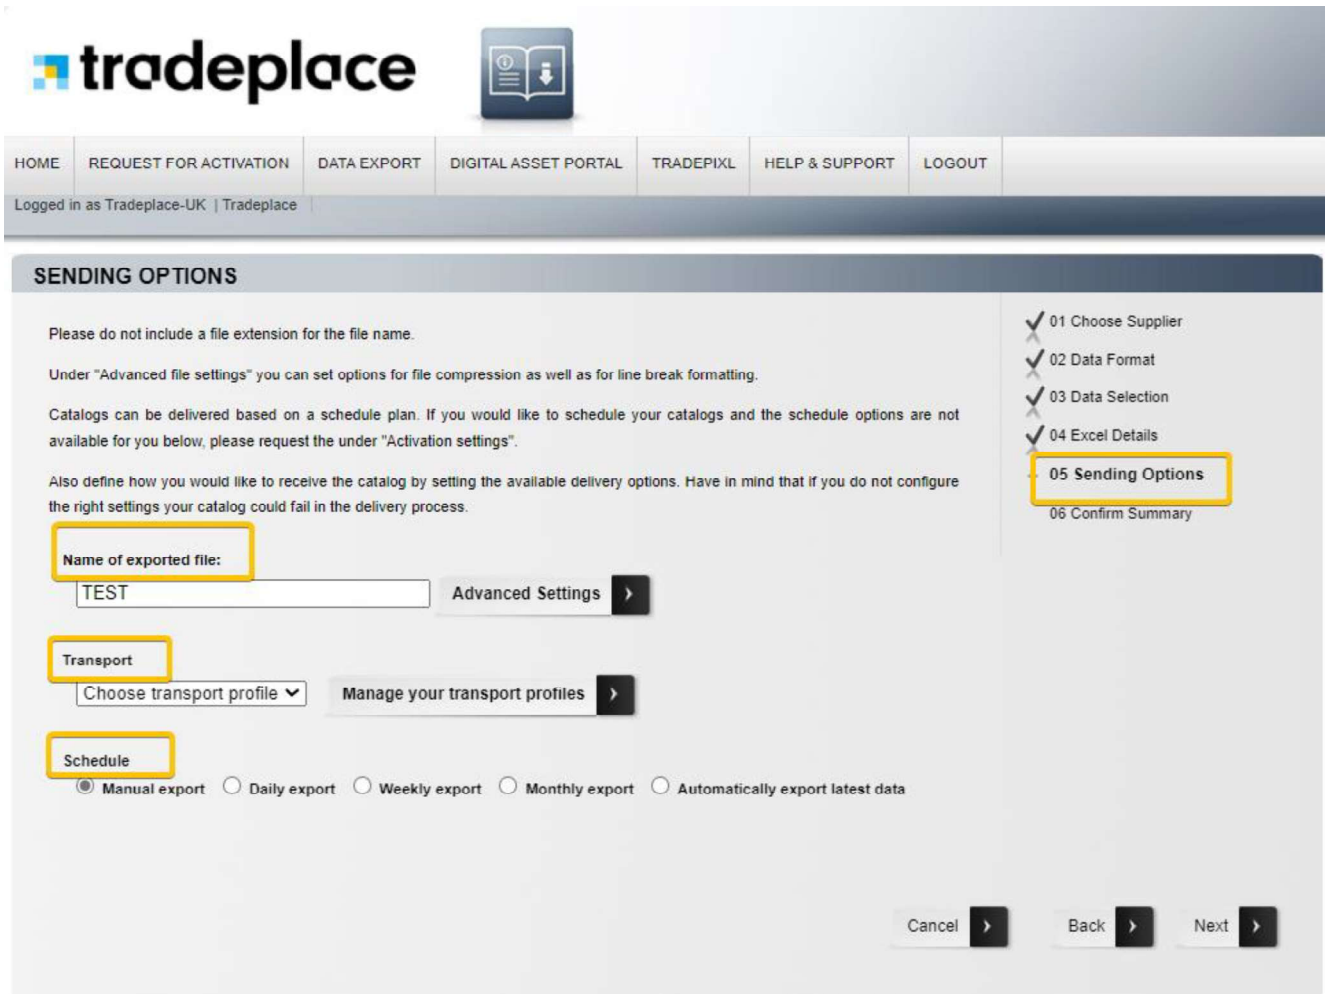

Cancel  Save 

Once finished click on **Save**.

Step 4: Sending Options

In the *Sending Options* step, you can define the settings for the delivery of the export file.

The screenshot shows the 'SENDING OPTIONS' step in the Tradeplace PIMS interface. The top navigation bar includes links for HOME, REQUEST FOR ACTIVATION, DATA EXPORT, DIGITAL ASSET PORTAL, TRADEPIXL, HELP & SUPPORT, and LOGOUT. Below the navigation bar, the 'SENDING OPTIONS' section is displayed. It contains instructions: 'Please do not include a file extension for the file name.', 'Under "Advanced file settings" you can set options for file compression as well as for line break formatting.', 'Catalogs can be delivered based on a schedule plan. If you would like to schedule your catalogs and the schedule options are not available for you below, please request the under "Activation settings".', and 'Also define how you would like to receive the catalog by setting the available delivery options. Have in mind that if you do not configure the right settings your catalog could fail in the delivery process.' The form includes a text input for 'Name of exported file:' with the value 'TEST', a button for 'Advanced Settings', a dropdown for 'Transport' with the value 'Choose transport profile', a button for 'Manage your transport profiles', a section for 'Schedule' with radio buttons for 'Manual export' (selected), 'Daily export', 'Weekly export', 'Monthly export', and 'Automatically export latest data'. On the right side, a progress bar shows steps 01 Choose Supplier, 02 Data Format, 03 Data Selection, 04 Excel Details, 05 Sending Options (highlighted), and 06 Confirm Summary. At the bottom, there are buttons for 'Cancel', 'Back', and 'Next'.

Enter a file name, please without a file extension, as this will be added automatically.

This is a close-up of the 'Name of exported file:' input field. It shows a text box with a cursor inside, and a button labeled 'Advanced Settings' with a right arrow.

You can make these additional selections in *Advanced settings*.

- Should the file be compressed?
- Should time stamps be added?
- HTML tags should be excluded.
- Currencies and units can be added.

You can also set the line break for short and long texts.

Transport profile

Once you have defined the settings in the transport profile, you can use it again for other exports at any time. The desired transport mode must also be specified. You have the following options:

- E-mail
- FTP
- FTPS
- SFTP
- HTML

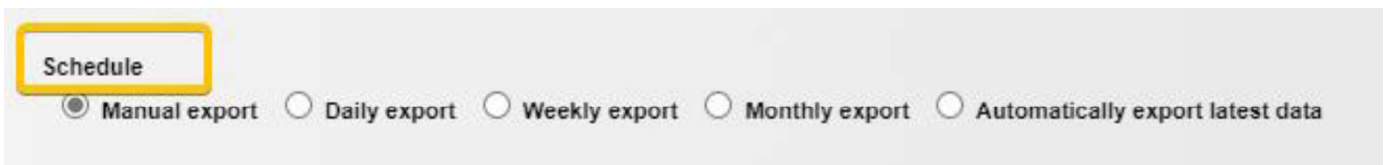

To do this, click on *Manage your transport profiles* in the delivery options.

Click on *Create new transport profile* or *edit* your previously saved profile.

Optionally, if the export planning has been activated (see previous chapter *Activation request*), the data export can be scheduled daily, weekly, monthly, or automatically.

The option to *Automatically export latest data* enables the data to be exported automatically as soon as the respective supplier has imported new data into PIMS.

Once you have made your entries, please click on "Next" to check all settings in the summary.

Step 5: Summary

Before you save and run the profile, you can check all the settings.

CONFIRM SUMMARY

Please review the following summary carefully in order to confirm your profile settings.

You can go back and review any of the step before confirming the Data Export profile.

When you have finished reviewing the profile give it a meaningful name and save it.

Supplier	BOSCH
Customer Code	ProdanetTest
Data Format	Excel
Language	DE
Export Classification	PI 17
Brands	All
Product Families	All
Name of File	Test all products
Transport	My Transport Profile

Profile name

03 Data Selection

04 Excel Details

05 Sending Options

06 Confirm Summary

Cancel

Back

Save profile

Save profile and execute now

You can repeat the last steps at any time and adjust the settings by clicking on *Back*.

Then assign a profile name and click on *Save profile*. If the profile is to be executed immediately, click on "*Save and execute profile*".

List of existing profiles

All saved export profiles are listed in an overview.

To make changes or delete them, click on *Edit* or *Delete*.

If you click on *Execute*, the export profile is executed according to your settings. You can see the status of the data export in the *Status* column.

Creation date	Profile name	Schedule mode	Actions	Status (CET timezone)
2/9/2021	Test all products	Manual export	Edit Delete Execute	Running

Create new export profile >

As you can create any number of export profiles, you also have the option of searching for profiles by entering text.

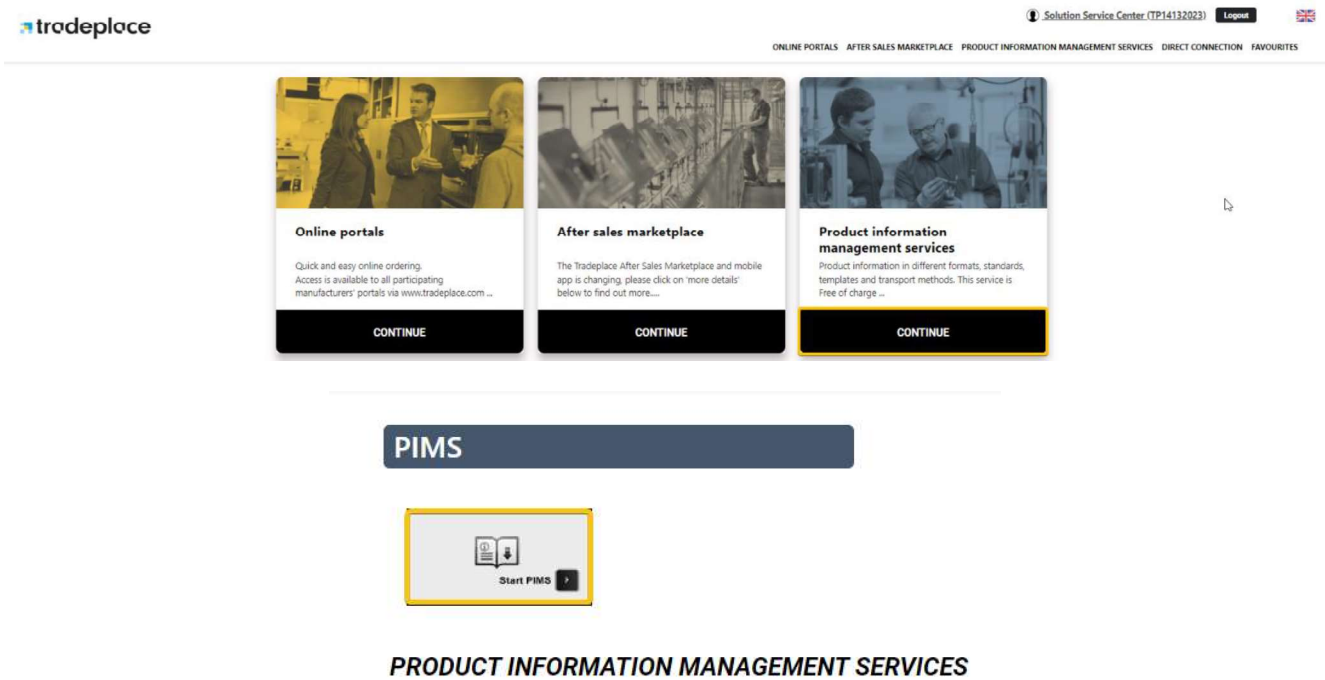

If you want to delete an export profile, you must confirm this. However, this does not affect templates or transport profiles, as these can still be used by other export profiles. If you want to delete templates or transport profiles, you have the option of doing this in the individual steps within the data export wizard.

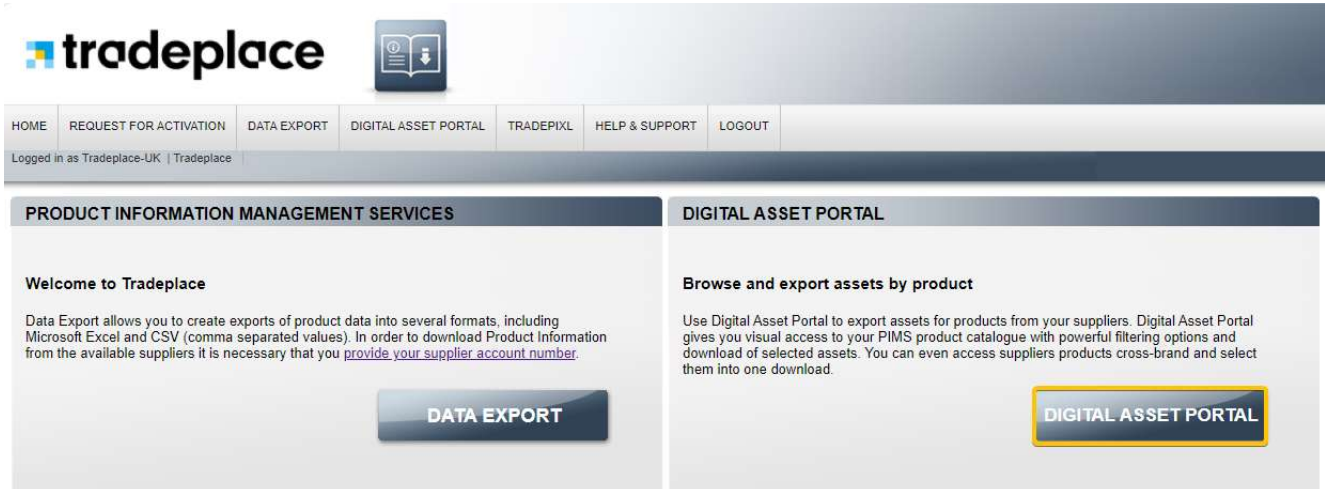

Digital Asset Portal (DAP)

This new tool provides you easier access to the Assets that are uploaded by the suppliers, you can filter through different criteria in various ways, allowing you to select individual items or asset categories completely.

To access the *Digital Asset Portal*, log in to your Tradeplace Account, start *PIMS*, and select the service.

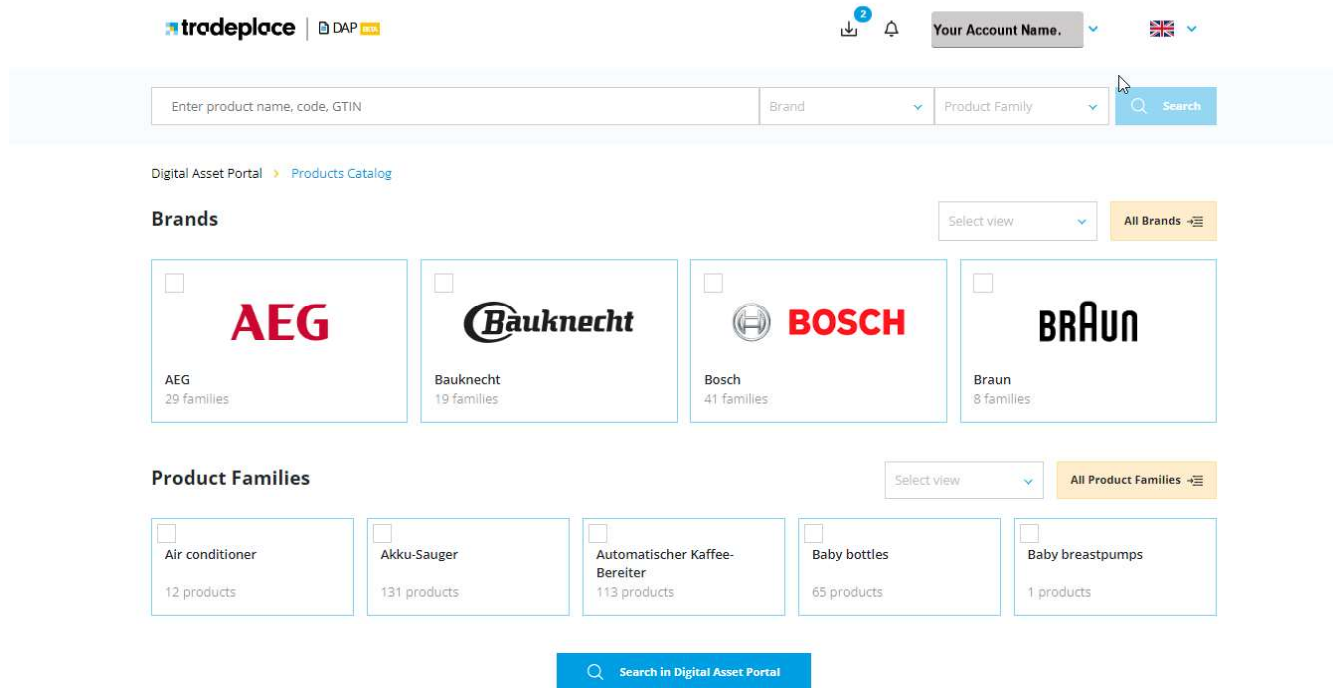

There is no extra registration process needed, if PIMS is active in your account, you will automatically receive access to the DAP.

On the home page, you can see all available Brands for your country, with the corresponding Product Families.

tradeplace | DAP

Enter product name, code, GTIN Brand Product Family Search
